

This flowchart outlines the functions of an iPhone, including the ability to make calls, answer calls, and access voicemail.

Features of an iPhone

This flowchart outlines the features of an iPhone, including its ability to play music and navigate the internet through interfaces for a music player and web browser. The iPhone itself is an abstract class with methods for making phone calls and accessing voicemail.

Interfaces for Music Player and Web Browser

This flowchart shows the interfaces for a music player and a web browser. The music player interface has attributes for playing, pausing, and selecting music, while the web browser interface has attributes for displaying pages, adding new tabs, and refreshing pages.
